PREFACE

This LABOR MARKET INFORMATION FOR RHODE ISLAND PLANNERS REPORT is a statistical and analytical publication designed to provide historical, current, and outlook information for use by employment and training program planners in developing programs and job training plans for the coming program year. It includes information on and analysis of employment, unemployment, the insured unemployed, population trends, mass layoffs, occupational trends and outlook.

The LABOR MARKET INFORMATION FOR RHODE ISLAND PLANNERS REPORT is just one of several Department of Employment and Training publications that can serve as a reference tool for economic policy-makers and practitioners, researchers and those in the community with an interest in employment and training issues.

Section 1. Description of State

A. General Information

Rhode Island, with a total land area of 1,058 square miles, the smallest for any state, had a preliminary 1990 Census population figure of 1,003,464, surpassing the one million mark for the first time. The state, whose physical size is comparable to that of the average U.S. county, has often been called a "City-State".

Rhode Island consists of five counties: Bristol, Kent, Newport, Providence and Washington, the largest of these being Providence County, which registered a 1990 Census population estimate of 596,270. The state capital is the city of Providence, which had a 1990 estimated population figure of 160,728. Four other cities in the State recorded a 1990 preliminary population estimate greater than 50,000: Warwick, the state's second largest city, with 85,427; Cranston, with 76,060; Pawtucket, with 72,644 and East Providence, 50,380.

Rhode Island enjoys several distinctions; it is the birthplace of textile manufacturing in the United States, as well as the location of the Tennis Hall of Fame and the Newport mansions. The salt water beaches in the Washington County and Newport area give Rhode Island the reputation of "ocean state" and make it an ideal tourist spot. The port of Providence is an excellent deep water port, with immediate access to air and rail facilities. The interstate highway system makes the State pivotal to the Northeast and to the Mid-Atlantic States.

B. Population Trends

Population data for the State of Rhode Island, its substate areas and the United States for the years 1980 and 1990 have been furnished by the United States Department of Commerce, Bureau of the Census. Preliminary population figures from the 1990 Decennial Census show that from 1980 to 1990 Rhode Island's overall population increased by 56,310 or almost 6.0 percent to an estimated 1,003,464.

All five counties in the state experienced population expansion but with varying degrees of intensity. According to preliminary 1990 Census data, the number of residents in the Washington County area stood at 110,006, an increase of 16,689 or 17.9 percent (the largest population percentage change) from the last Census count. Newport County's 1990 population figure rose to 87,194, representing a gain of 5,811 or a growth rate of 7.1 percent. Total residents in the Kent County area expanded by 6,972 to 161,135 in 1990, which was up 4.5 percent from the 1980 Census. Although Providence County grew by approximately 24,921 persons to 596,270 this gain reflected a population percentage increase of only 4.4 percent. The addition of 1,917 residents in Bristol County brought the area's 1990 population total to 48,859; however, this gain accounted for the smallest percentage change (+ 4.1 percent) of the five counties.

Population projection data prepared by the Rhode Island Division of Statewide Planning indicate that from 1990 to the year 2000, the state will experience continued population growth, but it will be at a much slower pace than the past decade.

While actual 1990 Census age cohort data is not yet available, projected data from the Division of Planning show an overall increase of approximately 3.4 percent or 33,936 from 1990 to 2000, which will be accompanied by a changing population composition. The projections indicate a substantial decline in the young entry level workers (20-24 years of age) category. In addition, a smaller decrease is expected in the number of workers 25 to 44 years of age. The shrinking youth labor force should produce an increased demand and more job opportunities for older workers. The 45-64 age segment is projected to reflect the largest gain over the next decade, advancing by 23.2 percent.

RHODE ISLAND POPULATION BY AGE GROUP

Years 1980, 1990 & 2000

C. Recent Economic Developments

The New England economy has undergone a significant downturn over the past year and a half. The region felt the effects of substantial job cutbacks in 1990 compared to its strong performance during the mid-1980's. Economic conditions in Rhode Island continued to weaken in 1990 after slowing down toward the last half of 1989. The state's annual average nonfarm employment fell for the first time since the 1982 recession. Total nonagricultural wage and salary jobs decreased by 2.6 percent or 11,900 to an average 450,100 in 1990. This annual decline was in sharp contrast to gains of 0.5 percent in 1989 and 1.7 percent in 1988. Significant increases were recorded in both the jobless level and the annual average unemployment rate, while the labor force dropped for the first time since 1983. The state's average unadjusted unemployment rate rose for the second consecutive year - from an estimated 3.0 percent in 1988 to 4.0 percent in 1989 to 6.8 percent for all of 1990.

Recent economic trends and the outlook are examined in greater detail in sections 2, 3 and 4 of this report. Tables illustrating trends in nonagricultural wage and salary establishment employment, by industry, are presented in Section 2. Tables illustrating occupational demand and projected job openings are presented in Section 3. Tables illustrating historical labor force and unemployment trends are presented in Section 4.

Section 2. Economic Developments and Outlook by Industry

A. Recent Developments

The general weakness of the Rhode Island economy in 1990 was evident by the annual reduction of total nonagricultural wage and salary jobs which declined for the first time since 1982. Nonfarm employment decreased by 11,900 or 2.6 percent to an average 450,100 for calendar year 1990. The overall number of nonfarm jobs reported for each month of 1990 was below its respective 1989 figure.

The 1990 downtrend in the state's economy resulted largely from substantial job cutbacks among the Goods Producing industries. Employment in the Goods Producing sector averaged 117,700 in 1990. This represented a decline of 11,100 jobs over the year and accounted for 93.3 percent of the total job reduction. Manufacturing losses continued in 1990 with 8,900 fewer jobs reported, reflecting an 8.2 percent decrease from 1989 levels. Factory employment has fallen in each of the last six years after rising in 1984. Manufacturing jobs, which numbered 99,500 in 1990, accounted for only 22.1 percent of total wage and salary employment compared to 23.5 percent in 1989 and 24.5 percent in 1988. The state's diverse manufacturing segments were impacted by the job losses with varying degrees of intensity - all but one segment (Food and Kindred Products which remained stable) recorded fewer jobs in 1990.

The most substantial annual average reductions were posted in Jewelry/Silverware (-1,700), "All Other" Manufacturing (-1,500), Textiles and Electrical Machinery (-1,100 each). Also experiencing decreases for the twelve month period were Fabricated Metal Products and Transportation Equipment (-900 each). Employment levels fell by 400 each in Rubber & Plastics Manufacturing, Instruments and Miscellaneous Manufacturing, followed by smaller downturns in Primary Metals, Nonelectrical Machinery (-200 each) and Apparel (-100).

The end of the construction boom has had an adverse effect on the Rhode Island economy for the past two years. Construction employment declined by 2,200 in 1990 after shrinking by 1,000 jobs the year before. Prior to 1989 the building industry had grown by an average of 1,750 jobs since 1982.

The uninterrupted expansion of jobs in the Service Producing sector following the 1975 recession was brought to a halt in 1990 with the reduction of 800 jobs. This 0.2 percent drop in Service Producing jobs contrasted sharply with the average 2.9 percent increase in this sector for the past 14 years.

In 1990, the Service Producing sector, at 332,400, accounted for 73.9 percent of the total nonagricultural employment compared to 72.1 percent in 1989 and 70.8 percent in 1988. Within this sector, Services employment advanced by 2.8 percent, or 3,500 jobs to 128,400. However, the growth in

this segment was well below the increases of 5.6 percent in 1989 and 4.4 percent in 1988. The leading service industries during 1990 were business services, health services and social services which, together, comprised approximately 75,400 jobs.

Employment in the Government sector rose 4,100 (primarily in local education) to an average 63,200 in 1990 from an estimated 59,100 in 1989. Transportation, Communication & Public Utilities and Finance, Insurance & Real Estate jobs increased by 300 each to 15,800 and 27,100, respectively.

Reflecting the sluggish economy, employment levels in Wholesale/Retail Trade declined by 8.4 percent or 9,000 to 97,900 in 1990. Annual downturns were recorded in every tabulated trade segment from 1989 to 1990 with the most notable job decreases occurring in wholesale trade (-3,000), eating and drinking establishments (-2,000), apparel & accessory stores and automotive dealers (-900 each). Prior to this past year, Trade employment experienced continuous expansion since 1982, growing by an average 4.1 percent over that seven year period.

B. Industry Outlook

Rhode Island lost 11,900 or 2.6 percent of its total nonagricultural wage and salary jobs in 1990. This was in sharp contrast to job gains of 0.5 percent in 1989, 1.7 percent in 1988 and 2.1 percent in 1987.

The state's economic woes over the past year and a half have been compounded by the continuing decline in the manufacturing sector and the lull in construction activity. The number of overall nonagricultural wage and salary jobs for each month of 1990 was below its respective 1989 figure. In fact, this trend has continued in the first five months of calendar year 1991.

It is expected that the current downturn in the Rhode Island economy will continue into Program Year 1991 (July 1991 - June 1992) as a result of further job losses in manufacturing, most notably, cutbacks in the defense industry, the slack commercial and residential real estate markets and the easing of job expansion in the Service Producing sector. Total nonagricultural wage and salary employment in Rhode Island should average approximately 445,000 in Program Year 1991 which would be 5,100 or 1.1 percent less than the calendar year 1990 level.

Manufacturing employment dropped to its lowest level on record, accounting for an annual average 99,500 jobs in 1990.

Factory jobs have fallen in all but one year (1984) since 1982. The erosion in the manufacturing sector is expected to continue into Program Year 1991.

Construction employment has been reduced by 3,200 jobs over the past two years, after growing by an average 1,750 jobs each year since 1982. Overbuilding in this industry contributed to the employment decline which has yet to bottom out. In Program Year 1991 it is likely that construction jobs will remain below their 1990 levels; therefore, the job outlook for the upcoming year does not appear to be optimistic.

While the state's construction and manufacturing jobs decreased, the most alarming decline occurred in the Service Producing sector which lost 800 jobs in 1990, the first such downturn since 1975. Prior to 1990, this sector had grown by an average 2.9 percent in each of the last 14 years. With the pace of Service Producing jobs coming to a halt, this sector can no longer be counted on to replace jobs in manufacturing and construction. Employment in the Service Producing sector is not expected to experience any appreciable growth in Program Year 1991.

DISTRIBUTION OF WORKERS BY INDUSTRY

Rhode Island, 1990 vs. 1989

Section 3. Employment Developments and Outlook by Occupation

A. Recent Developments

The best available indicator of recent occupational demand in the state is Job Service job openings, which represent unfilled employer job orders. Openings which have remained unfilled for 30 days or more are considered hard-to-fill. This section details occupations which had 25 or more hard-to-fill openings at the end of any calendar quarter in 1990. Due to the current economic situation in Rhode Island, the number of available job openings has dwindled considerably compared to the number listed a year ago.

The Professional, Technical and Managerial category reported only three occupational titles as hard-to-fill in 1990; however, these professional occupations (registered nurse, licensed practical nurse and air-traffic-control specialist) accounted for a substantial number of hard-to-fill openings. In most instances, a high level of education or specialized training is required for these positions.

It is not unusual to find a large number of openings in the Clerical and Sales occupations. These jobs are often entry-level positions and are generally low paying. The occupation with the greatest number of job openings unfilled for 30 or more days in this category was telephone solicitor. Additional hard-to-fill occupations in this category included survey worker, telephone directory deliverer, terminal system operator and survey worker supervisor.

The largest concentration of hard-to-fill occupations occurred in the Service category. According to the quarterly average of unfilled openings, correctional officer accounted for the greatest number of hard-to-fill jobs. There were also numerous openings for amusement ride operator, home health aide, restaurant cook, nurse aide and cafeteria counter attendant. Seasonal, temporary or part-time positions make it difficult to attract or retain employees for these jobs.

The Agriculture, Fishing and Forestry category did not report one occupation with 25 or more hard-to-fill openings at the end of any calendar quarter in 1990.

The only Processing occupation appearing on the list was centrifugal-casting-machine operator. Positions in this category are generally low-paying with limited advancement potential.

The occupation in the Machine Trades category which was considered hard-to-fill for 30 or more days during 1990 was outside machinist.

Benchworking occupations often have a large number of openings unfilled for 30 consecutive days or more due to low pay and limited advancement potential. There are often more applicants than openings for these jobs, but due to the high turnover in this group, openings are almost always available. The only hard-to-fill opening recorded in benchworking was jewelry assembler.

Many of the Structural occupations are of a seasonal nature and have the greatest number of openings in warm weather. Other structural jobs, such as those in the shipbuilding industry have year-round demand. However, due to specific skill and experience requirements for these jobs, many are rendered difficult to fill. The hard-to-fill openings in this category included construction worker II, pipe fitter and sheet metal mechanic.

The occupation in the Miscellaneous category which had the largest number of hard-to-fill openings was material handler followed by truck driver helper.

The following table lists the occupations which had at least 25 job openings unfilled for more than 30 days at the end of any calendar quarter of 1990. Also shown is the quarterly average of hard-to-fill job openings.

OCCUPATIONS WITH JOB OPENINGS UNFILLED FOR 30 DAYS OR MORE DURING 1990 -
 QUARTERLY RANGE OF OPENINGS UNFILLED
 AND QUARTERLY AVERAGE NUMBER OF OPENINGS UNFILLED

905.687-010	TRUCK DRIVER HELPER	0 - 44	11
929.687-030	MATERIAL HANDLER	21 - 129	74

B. Occupational Outlook for Program Year 1991

The decline in the state's job market activity was evident throughout 1990 and was also reflected in the overall number of hard-to-fill occupations from the March 1991 Job Service job list.

Based on the types of occupations which had the greatest numbers of hard-to-fill openings during 1990, several of the jobs which will be available in Program Year 1991 are anticipated to be in relatively low paying, unskilled, high turnover occupations. Although demand for highly trained persons and college graduates will be more limited, there should be numerous openings available for some professional occupations such as registered nurse and licensed practical nurse.

It should be noted that the demand list included in this section represents only those job openings listed with the Rhode Island Job Service, and the exact extent to which the Job Service constitutes a primary hiring channel for a given occupation is not known. Demand, therefore, is more likely to be understated than overstated; also, some occupations for which a significant demand exists may not be apparent from the data available

Based on last year's list of unfilled openings and job openings which have recently been received by the state Job Service, the following is a list of occupations for which there will most likely be a demand in Program Year 1991.

<u>Professional and Technical:</u>	Registered nurse, licensed practical nurse, air-traffic-control tower specialist.
<u>Clerical and Sales:</u>	Insurance sales agent, financial planner, cashier-checker, telephone directory deliverer.
<u>Service:</u>	Cafeteria counter attendant, cook, housekeeper, home attendant, informal waiter/waitress, fire fighter, correctional officer, security guard, kitchen helper, nurse aide.
<u>Processing:</u>	Centrifugal-casting-machine operator.
<u>Benchwork:</u>	Jewelry assembler.
<u>Structural:</u>	Sheet-metalworker, pipe fitter, construction worker II.
<u>Miscellaneous:</u>	Material handler.

C. Long-Term Occupational Outlook

Data from the publication Rhode Island Occupational Projections to 1995 indicates the largest number of annual job openings will be found in service occupations and clerical occupations. Significant numbers of openings will also occur in the professional, technical and kindred occupations and in the managers and officials category. Very few jobs will be available in the transportation equipment operatives and farm workers categories.

In all occupational groups, the majority of job opportunities will be the result of separations from the labor force, rather than economic expansion. Separations from the labor force include worker retirements, deaths, and persons leaving jobs to raise families.

Only one occupation - sales clerk - is expected to have more than 700 annual job openings. Almost two-thirds of these openings will be the result of worker replacement. There are anticipated to be more than 600 openings annually for secretaries and general office clerks.

Openings for cashiers, professional nurses, guards and doorkeepers, nurse aide/orderly and waiter/waitress are expected to range between 500 and 600 positions annually.

Openings for elementary teachers and kitchen helpers are expected to average between 400 and 500 positions annually. Hand bookkeepers, store managers and carpenters are anticipated to have from 300 to 400 jobs available each year. Between 200 and 300 openings annually are forecast for accountants and auditors, fast food preparation and service workers, childcare workers, technical sales representatives, bartenders, blue collar working supervisors, licensed practical nurses, and accounting clerks.

Between 100 and 200 annual openings are projected for: receptionists, assemblers, secondary teachers, restaurant/coffee shop managers, bus drivers, automobile mechanics, lawyers, typists, gardeners and groundskeepers, production packagers, clerical supervisors, nontechnical sales representatives, restaurant cooks, sales floor stock clerks, physicians and/or surgeons, hairdressers/cosmetologists, delivery & route workers, inspectors, maintenance painters, computer programmers, bank tellers, jewelry bench hands, postal mail carriers, and social caseworkers.

The following table lists by occupation the average annual number of job openings expected to occur due to growth and separation between 1985 and 1995.

D. Potential Occupational Supply

The following table is a list of occupations in which there were 50 or more active applicants on file with the Rhode Island Job Service at the end of March 1991. An active applicant is a person who is available for referral to a job.

According to the Job Service data, there are a variety of occupations which have a substantial number of available job applicants. An occupation which has over 50 applicants shows a definite labor surplus. While some of these applicants are employed, the majority of applicants do not have a job.

Several of the occupations on this list are not relevant to the types of training conducted under the Job Training Partnership Act (JTPA) and similar programs. However, program administrators should take note of those occupations in which there is a significant labor surplus when planning job training curricula.

Section 4. Recent Trends in Unemployment and Outlook for
Program Year 1991

The state's total civilian labor force, which was unchanged at 525,000 from 1988 to 1989, declined by 9,000 in 1990 to an annual average of 516,000. This figure was at its lowest level since 1986 and represented the first annual labor force downturn since the 1982-1983 period. The average number of employed Rhode Island residents fell by 23,000 or 4.6 percent to 481,000 in 1990 while the average jobless level climbed to 35,000, an increase of 14,000 from 1989. As a result, the state's 1990 annual average unemployment rate jumped to 6.8 percent, up 2.8 percentage points from the 1989 average. This was the second consecutive increase in the annual rate after six consecutive years of improvement. Both the jobless total and the unemployment rate in 1990 were at their highest levels since 1983. Moreover, the 2.8 percentage point increase in the rate was the largest annual upturn since the rate surged from 7.3 percent in 1974 to 11.2 percent in 1975.

On a seasonally adjusted basis, the monthly unemployment rate, which rose sharply in the last half of 1989, continued to climb in 1990 (aside from February to March when the rate was unchanged). The rate peaked at 7.2 percent in July reaching its highest level since October 1983, then declined steadily until November where it remained at 7.1 percent for the last two months of the year. The state's unemployment situation intensified in 1991 as the rate increased from January to February before improving modestly over the last three months.

While the Rhode Island economy is expected to improve somewhat during Program Year 1991 (July 1991 to June 1992) the annual average unemployment rate is projected to fall within the range of 7.0 to 7.5 percent for that twelve month period.

Section 5. Mass Layoff Statistics Program

The current economic situation in Rhode Island has been impacted by the growing number of layoffs and plant closings. Mass layoffs affect many industries, populations and geographic areas, resulting in the dislocation of workers. For this reason, the Mass Layoff Statistics (MLS) program has emerged as an important new resource in furthering unemployment analysis.

The MLS program is a data collection program conducted by the state employment security agencies in cooperation with the Bureau of Labor Statistics. The MLS program was designed to identify, describe and track the effects of major job cutbacks using data from the state's unemployment insurance database.

In Rhode Island, establishments which have at least 20 initial claims filed against them during a consecutive three week period are targeted for telephone contact by the Labor Market Information Unit to determine: 1) whether the separations are 30 or more days in duration, 2) the total number of persons separated, 3) the reasons for the separations and 4) whether or not the establishment expects to remain open. Individual employer information is treated confidentially and is accessible only to authorized persons. Establishments are classified by both industry and geographic location.

Rhode Island has participated in the MLS program since 1987. The information is gathered monthly and submitted to the Bureau of Labor Statistics on a quarterly basis.

The strength of the MLS program lies in its ability to yield valuable information concerning a facet of the Rhode Island economy where little data were previously available. This particular data collection program allows for the identification and targeting of areas, industries and worker groups which may be experiencing economic distress in relation to other segments of the economy.

The number of MLS events in Rhode Island climbed to 121 in 1990, representing an increase of 62 from the 1989 figure of 59. Slack work, seasonal and "other reasons" accounted for almost 79 percent of the total MLS events in 1990. The latter category, "other", includes reasons mentioned by the employer which are not routinely collected by the Bureau of Labor Statistics. Overall MLS initial claims (retrieved from the state's U.I. database system) rose to 5,897 in 1990, advancing 2,483 compared to the prior year's total of 3,414.

The following table presents a comparison of MLS events and MLS initial claims by reason for the years 1989 and 1990.

NUMBER OF MLS EVENTS AND MLS INITIAL CLAIMS BY REASON

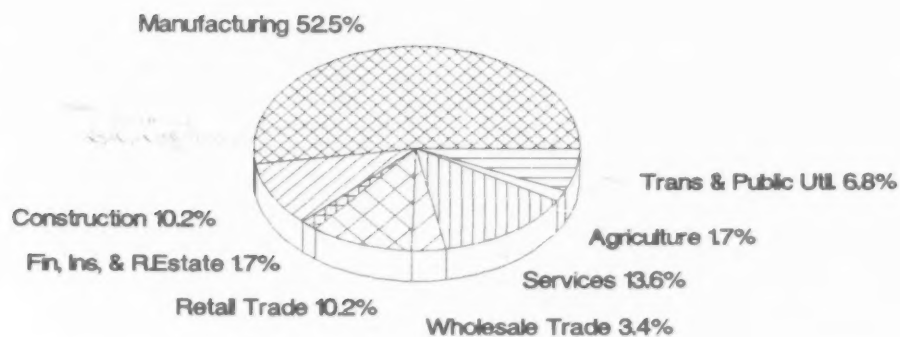

1989 - 1990

REASON	NUMBER OF EVENTS		MLS INITIAL CLAIMS	
	1989	1990	1989	1990

1990

Section 6. Characteristics of the Insured Unemployed

The average number of insured unemployed (persons collecting regular Unemployment Insurance benefits) rose by 5,839 from 13,437 in 1989 to 19,276 in 1990. This annual upturn was characterized by an increase in the number of both males (3,252 or 42.0 percent) and females (2,587 or 45.5 percent) collecting benefits. Men and women in the under 45 category accounted for the largest over-the-year expansion of 3,018 and 2,331, respectively, while those in the 45 and over category represented annual advances of 234 and 256 each.

Every tabulated industry registered an increase in the number of insured unemployed in 1990 compared to its year ago level. Among industry groupings, Manufacturing recorded the most substantial increase in insured unemployment, followed by Trade, Service and Contract Construction. In addition, smaller annual gains were recorded in Finance, Insurance & Real Estate, Transportation & Public Utilities and the "All Other" category.

Within the occupational skills categories, the largest increase in insured unemployment occurred in the Clerical and Sales occupations, followed by Structural Work, Professional, Technical & Managerial occupations, Miscellaneous occupations, Machine Trades and Service. Also reporting annual gains were Processing and Forestry, Fishery & Related occupations. In contrast, Benchwork recorded the only downturn in the number of insured unemployed compared to one year ago.

-APPENDIX-

Sources of Data

Population totals for 1980 and 1990 were obtained from the 1980 and 1990 Census of Population furnished by the United States Department of Commerce, Bureau of the Census. The 1990 age cohort data and projections for the year 2000 were provided by the Rhode Island Division of Statewide Planning.

Establishment employment data, labor force statistics, information on mass layoffs and claimant characteristic data prepared by the Labor Market Information Unit of this Department were major sources of material used in this publication. Employment and unemployment estimates were developed in accordance with the methodology required by the Bureau of Labor Statistics, U.S. Department of Labor.

Computerized data on Job Service applicants and openings from the Job Bank summary tables were also used in the preparation of this report.

Technical Notes and Explanatory Material

The employment and unemployment information in this report was compiled by the Labor Market Information Unit of the Rhode Island Department of Employment and Training affiliated with the Employment and Training Administration and the Bureau of Labor Statistics, U.S. Department of Labor. Data in the report is based in part on current survey data collected from a sample of local employers, as well as information developed in the course of the normal operations of the Job Service and Unemployment Insurance Programs operated by the Rhode Island Department of Employment and Training.

An explanation of some of the technical terminology of various topics discussed in the report is presented on the following pages.

Establishment Employment

Nonagricultural wage and salary establishment employment for the state is compiled each month from a sample survey of establishment payroll records for the reference week including the twelfth. The nonagricultural wage and salary employment figures actually represent a count of jobs within the State of Rhode Island. They relate to place of work of the employee, not to place of residence. In addition, these employment figures exclude self-employed, unpaid family workers, domestic workers, agricultural workers and workers involved in labor-management disputes. To the extent that multiple job holding exists during the payroll period, the establishment payroll records may count a person more than once. Furthermore, the payroll data include incommuters who reside out of state, but exclude outcommuters who work outside the state.

Labor Force Estimates

Labor Force statistics included in this report for the State of Rhode Island are conceptually comparable with those released by the U.S. Department of Labor each month for the country as a whole. However, they are developed on the basis of a different procedure.

Currently, the Bureau of Labor Statistics (BLS) produces labor force estimates for the Nation and for the 11 largest states directly from the Current Population Survey (a sample of households throughout the country). Until 1989, unemployment statistics for the other 39 states were based on data from Unemployment Insurance programs. However, these estimates were not comparable from state to state because of differences in these programs.

Beginning in January 1989, the Bureau shifted to a new method of calculating monthly employment/unemployment estimates for the 39 states, including Rhode Island. The new method uses time series regression models which permit use of Current Population Survey (CPS) data, Current Employment Statistics (CES) data and Unemployment Insurance (U.I.) data in a more accurate and reliable manner. Two estimating equations are used for each state, one for employment and the other for the unemployment rate. Both models automatically adjust to structural change in the state's economy. Once the data are incorporated into the models for the month, the labor force statistics are calculated. The employment figure developed from this methodology represents Rhode Island residents who are employed anywhere, either in the state itself or outside the state.

The unemployment rate represents the number of unemployed workers as a percent of the civilian labor force. Civilian labor force is the sum of all employed persons (exclusive of the Armed Forces), the unemployed, and persons involved in labor-management disputes.

Job Openings and Job Applicants

The information on job openings and job applicants found in this report is based upon data on job openings listed and applicants registered for work with the Rhode Island Job Service. While such openings are in general reasonably representative of the kinds of occupations in demand in the state, Job Service unfilled openings (the total of employer orders which are on file and which have not been filled as of a particular day) may understate needs in some occupations for which hiring is normally handled through other channels such as union hiring halls. Openings unfilled for one month or more are generally considered hard-to-fill.

Job applicants registered with the Job Service are reasonably representative of the available worker supply in most occupational categories. These job seekers include unemployed persons, new and re-entrants to the labor force, and currently employed workers seeking a job change.
